

What to watch?

Well...How do you feel?

NETFLIX

1. Do you want to watch a movie or TV show on Netflix?

2. **YOU** pick a mood

3. **WE** recommend Genres

4. **WE** recommend the top 5 results

5. **YOU** enjoy your film!

How it works:

- We've compiled a list of recommendations for each movie genres, and from there the user can choose whether they'd like to read more about the film they've selected. This allows for a narrowed-down more specific search.
- Using our code can cut back on browsing time, because streaming sites like Netflix can have browsing services that are overwhelming and take too long to navigate.
- Studies show that data experts at Netflix have calculated that users normally spend just 60 to 90 seconds browsing on Netflix before they get tired and give up.
- Although Netflix is attempting to make their recommendation service better, we believed that we could make a browsing recommendation service that was quick, easy to use, and efficient for Netflix users.

Inputs:

Mood keywords

User selects one of our recommendations

Outputs:

Genre suggestion

Movie and TV show suggestions based of the users mood

Link to the reviews and details of the users selected movie or show

Link to watch the show on Netflix
